

Bathroom Cleaning Tips

It only takes a minute.....

You can keep the bathroom fresh and clean everyday!!

On a regular basis the entire bathroom fixtures need to be cleaned with mold killing products (disinfectants, cleansers, or mildew removers.) Some popular products are Clorox Clean Up and X-14. Be sure to read the manufactures instructions. To make the bathtub and shower wall sparkle, you need to follow the first cleaning with a second cleaning using a soap scum remover (Scrub Free, The Works). You will be proud of the result. Your tub will sparkle. And every time you shower or bathe, you can use of the new products such as Clean Shower on the tile walls and tub. This will help to keep the bathroom cleaner and fresher between the regular cleanings.

BE SURE TO USE THE VENT FAN EVERY TIME YOU SHOWER OR TAKE A BATH. THIS WILL PREVENT MOISTURE BUILD UP IN THE BATHROOM ON THE WALLS, ETC.

After bathing pull the shower curtain so it is open flat. This will allow the shower curtain to dry easier and it will help to reduce the mildew from forming quickly. Replace the shower curtain liner at least once every six months.

IT DOES MAKE A DIFFERENCE

THANK YOU
